

# Persuasive Paragraphs and Billboards

Grade 4 Robyn Wayrynen and Tammy Rumprik

Hunter Dean, James Clark School, Grade 4

Have you ever thought about saving electricity? We use more than 50 kWh of electricity for one person a day. That's a lot!! We also should not use electricity because it can save a lot of money. Did you know that if you keep your phone or computer charger plugged in and it's full you can waste electricity? We can also save electricity by turning off lights, your tv and closing the fridge when you're done. You can also save electricity by using less light and power. If you save energy, you can help the earth.

Gavin Burke, James Clark School, Grade 4

Do you like to save electricity and money? In a lot of places electricity is expensive and it might be where you are. It is best to use renewable energy or just try not to use any energy if you want. The best ways to save energy are by turning off lights, don't take long showers, and go on hikes and bike rides instead of playing video games because that uses a lot of electricity which costs a lot of money. The best thing to do is go play in the woods if you live near one. If you don't, then go to a playground. You can play for a while and you can make friends there. You can even play sports which do not use electricity. So what will you do, save electricity or don't save it? Have a lot of bills and go broke?

Brandon Beatty, James Clark School, Grade 4

Did you know Renewable energy creates five times more jobs than fossil fuels? It's a form of clean energy which has numerous health and environmental benefits. Did you also know you can save money by using renewable energy? Solar and wind power are the most common renewable energy sources. A single wind turbine can power thousands of homes. Our planet's future and well being depends on renewable energy!

Aubrey Divirgilio, James Clark School, Grade 4

Save electricity, save our environment! Here are some ideas. You can turn off the lights when you are done in a room. Use sunlight instead of electricity. Go near windows if you are reading or drawing instead of electric light. Also don't open doors and windows with air conditioners on. You don't want to waste the cool air. If you're not watching tv, turn it off. Instead of watching tv, you should go outside. Instead of using heat at night, use a blanket. Everyone can try to save electricity, kids and adults.

Alexi Federico, James Clark School, Grade 4

I wonder how much energy I use in one day. The average American household uses about 28.9 kWh per day. Oh, wow! That is a lot of energy. We need to reduce the amount. We can do that by taking shorter showers. You know when it gets really cold? You want to turn on your heat. Instead, wear a blanket, a coat, or a warm sweater. If you have an electronic like a phone, video games, and computer when you are done, you should unplug it. Last, if you leave a room, you should turn the lights off. There are so many ways to save energy and these were only some of them. So, let's try to save energy.

Zacharia Boissonneault, James Clark School, Grade 4

I wonder how much non renewable energy we use every day. We should use renewable energy.

Everyday we aren't just wasting non-renewable energy we are polluting the earth and that's bad

for the environment. We need to use renewable energy and I mean it. What is renewable

energy? The sun, the wind, and the water; that's all renewable energy. We need to save our

world, we need to save our energy. Did you know that the average human wastes a lot of energy

every day? I literally mean, turn off every single thing when you go to bed. Or just get wind

turbines or solar panels. So next time you leave your lights on, make sure you get wind turbines

or solar panels. Now is the time to save our world. We need to help our environment. Let's do

this thang!

Help  
SAVE OUR  
ENVIRONMENT  
FOR THE  
WORLD

PLEAS DONT  
PALUTE

Jacob Gousse, James Clark School, Grade 4

Do you know a Tesla is an electric car? Well this car has a very fast speed up to 190 mph.

“That is a lot of speed”. And it can go from 0 to 60 in 2.1 seconds. Sometimes a Tesla or other electric cars can beat a Lamborghini. That's surprising! It's good that it's electric because it will not pollute the planet. If you have solar panels on your house, you can plug your electric car into your house and it will charge it for free and save you money. And that's the best part of it. You can save electricity and money by using solar panels. That's why a lot of people have solar panels on their house. The panels are very expensive, but they are worth it. You can save a lot of electricity, money and the planet!

Khari Njiiri, James Clark School, Grade 4

Do you know how to save electricity? Here are some ways. When you leave a room, turn off the light and the tv. Don't take long showers that also use a lot of electricity. When it is day time and the sun is out, you don't need to turn on the light. Just open the blinds or curtains. If you are done playing a video game, you should unplug it. Even if you turned it off and it is still plugged in, it still uses electricity. When it is night time and you're going to bed, make sure you turn off your light and your L.E.D lights. You're going to brush your teeth and make sure you don't keep the water running. Also don't keep the water running when you are using the bathroom. If you are ready to take a shower don't leave the water running. That's how you can save energy!

Logan Cormier, James Clark School, Grade 4

If you save electricity, you save money. Electricity can cost a lot of money. When we save electricity, we use less, and therefore, we pay less. Here are some ways to save electricity.

Turn off lights. Make sure to close the refrigerator and know what you want to get from it.

Turn off TVs or Video games if you are not using them. Instead of putting the heater on if it is a cold day, wear a jacket. If you can do these little things, it can save electricity and money. That can help you and your environment.

Makenzie Moquin, James Clark School, Grade 4

Imagine the world with less pollution. How can we do that by using less energy? One way to save energy would be to turn off the video games and play board games instead. We could read a book instead of going on the computer to read. If we use too much electricity, it's bad for the environment. Electricity comes from nonrenewable energy and that can dirty our world and cause more air pollution. Another way to save energy is, maybe choosing to get solar panels or windmills to power your homes. Did you know that most homes use about 28.9kwh per day? Wow, that's a lot! Another tip to save energy is to unplug what you are not using so you can save extra energy and money. If everyone in the world made small daily changes, we could help save energy and decrease the amount of air pollution.

Mariam Elbakri, James Clark School, Grade 4

Do you think you're using too much energy? Well, you might be, but you don't realize it. Maybe you're leaving the lights on when you leave a room. Even though that may seem so unimportant, it is very important. When you leave a room but keep the lights on, it uses so much energy.

Think back throughout the last couple of years when you left the lights on. All of those times could be enough energy to make a massive difference. You may remember to turn off the lights when you leave a room, but when you are in it, is it really necessary? What if it were daytime? If the sun is shining, then don't turn on the lights. It's really that easy. Don't turn the lights on until it gets dark. When it is dark and you leave a room, remember to turn off the lights.

Kaylee Rovithis, James Clark School, Grade 4

Did you know that using too much electricity is bad for the environment? And did you know you should unplug phone cords when you are not using them? If you live with your mom and dad, you should do them a favor and maybe turn off the TV or your room light. That will save electricity and money for the electricity bill. Save our earth and turn off the stuff that you are not using to help the world.

Thomas Christopher, James Clark School, Grade 4

If you save electricity, you save money also. Did you know by turning off a light you save energy? You shouldn't use energy when you don't have to. If you save electricity, you save the planet. For instance, if it is sunny, open a blind instead of using a light and when your device is fully charged, unplug the charger from the wall to save energy. And if you're taking a bath, use only the water you need or just take a shower. Instead of using a gas powered vehicle, ride a bike or buy an electric car. If you save energy, you also save the planet.

Save electricity

Save money
